

METRAXT®

HAZARDOUS METAL EXTRACTION SYSTEM

METRAXT® is an aqueous system developed specifically for the cleanup of metals on solid surfaces. **METRAXT** has the capability of being applied as a foam blanket which allows application to overhead, vertical and horizontal surfaces.

METRAXT is formulated to remove a variety of heavy metals from concrete, asphalt and metal surfaces, and has demonstrated excellent extraction efficiencies. This efficiency rate translates into less work, less time, and less product usage than conventional cleanup methods. **METRAXT** easily vacuums up from surfaces. Surfaces are lightly rinsed with water, which is also vacuumed off. Easier removal results in lower labor cost. Surfaces decontaminated with **METRAXT** use dramatically less product, resulting in less hazardous material to

dispose of after the cleanup. **PRODUCT COVERAGE:** Application coverage rate will vary with surface porosity and operator proficiency. The following are average coverage rates: Concrete = 100 sq. ft. per gallon; Asphalt = 105 sq. ft. per gallon; Metals = 125 sq. ft. per gallon. **NOTE: This material is corrosive to metal surfaces. METRAXT is available in 5- and 55-gallon containers.**

Emergency information regarding ingestion, skin contact, eye contact or inhalation is included in the Material Safety Data Sheet (MSDS).

METRAXT Benefits

- High Extraction Rate
- Lower Labor cost
- Successful on Old and New spills
